## Le Rondin School

## Calculation

Policy

## Concrete, pictorial and Abstract (CPA) approach

At Le Rondin, we recognise that the Concrete Pictorial Abstract (CPA) approach is highly effective in the teaching of Maths to develop conceptual understanding. This approach will vary between year groups and the individual abilities of children within each class.

## Concrete - The doing stage

There is a clear focus on the use of manipulatives and visual images to support understanding in every year group. Each new concept or calculation strategy will be introduced using appropriate manipulatives, giving the children a clear picture of the theoretical mathematics they are learning. It is important that children have access to a wide range of manipulatives in every year group and, consequently, we encourage children to be independent in their use of manipulatives throughout the school and access resources as they see fit. This is the foundation for conceptual understanding.

Concrete resources that may be found in classrooms will include:

These resources will vary depending on year group and individual needs.

## Pictorial - The seeing stage

A child has sufficiently understood the hands-on experiences performed and can now relate them to representations, such as a diagram or a picture of the problem.

## Abstract- The symbolic stage

A child is now capable of representing problems by using mathematical notation, for example $10 \div 2=5$

| :---: | :---: | :---: |
| Concrete | Pictorial | Abstract |
| Dividing whole numbers by 10, 100 and 1,000 <br> Use place value equipment to support unitising for division. $4,000 \div 1,000$ <br> 4,000 is 4 thousands. $4 \times 1,000=4,000$ <br> So, $4,000 \div 1,000=4$ <br> Concrete and pictorial representations may still be required to support the formal method of division (Bus Stop) - Go back to LKS2 to consolidate learning. | Understand how and why the digits change on a place value grid when dividing by 10 , 100 or 1,000 . <br> $3,200 \div 100=$ ? <br> 3,200 is 3 thousands and 2 hundreds. $\begin{aligned} & 200 \div 100=2 \\ & 3,000 \div 100=30 \\ & 3,200 \div 100=32 \end{aligned}$ <br> So, the digits will move two places to the right. <br> Continue to use blank number lines as appropriate, using multiples of the divisor. $65 \div 5=13$ | Chunking <br> Chunking is repeated subtraction of the divisor and multiples of the divisor. $\begin{array}{rll} 73 \div 5 & \begin{array}{r} 5 \\ \\ \\ \\ \\ \\ \\ \\ \\ \\ \\ \frac{-50}{23} \\ (\underline{20} \\ 3 \end{array} & (4 \times 5) \end{array} \quad 10+4=14$ <br> How many 5 s have been subtracted? 14 sets of 5 , with 3 left over. <br> Answer: $73 \div 5=14 \mathrm{r} 3$ <br> Bus Stop Method for division <br> Begin with divisions that divide equally with no remainder. <br> Move onto divisions with a remainder. |

Dividing decimals by $\mathbf{1 0 , 1 0 0}$ and $\mathbf{1 , 0 0 0}$
Use place value counters to represent dividing by 10，100，1000．Represent division using exchange on a place value grid．

Exchange each o．for ten 0.01 s

Divide 20 counters by 10 ．
0.2 is 2 tenths．

2 tenths is equivalent to 20 hundredths． 20 hundredths divided by 10 is 2 hundredths．

Represent division to show the relationship with multiplication．Understand the effect of dividing by 10,100 and 1,000 on the digits on a place value grid．

$0.85 \div 10=0.085$

$$
8.5 \div 100=0.085
$$

Finally move into decimal places to divide the total accurately using a formal method for division（Bus stop）

## Long Division－Abstract Method

Calculations will start with tens and ones and move onto more advanced division calculations．

| 1．Divide． | 2．Multiply \＆subtract． | 3．Drop down the next digit． |
| :---: | :---: | :---: |
| $\begin{gathered} { }^{t}{ }^{\circ} \\ 2 \longdiv { 5 } \end{gathered}$ <br> Two goes into 5 two times，or 5 tens $\div 2=2$ whole tens - but there is a remainder！ | $\begin{gathered} t 0 \\ 2 \\ 2 \longdiv { 5 8 } \\ \frac{-4}{1} \end{gathered}$ <br> To find it，multiply $2 \times 2=4$ ，write that 4 under the five，and subtract to find the remainder of 1 ten． | $\begin{array}{r} t \circ \\ 29 \\ 2 \longdiv { 5 8 } \\ -4 \downarrow \\ \hline 18 \end{array}$ <br> Next，drop down the 8 of the ones next to the leftover 1 ten．You combine the remainder ten with 8 ones，and get 18 ． |
